GENETICS SCHOLAR FROM SWEDEN
STUDIES AT UNIVERSITY OF MONTANA

MISSOULA--

Dr. Nils Ryman of the Department of Genetics at the University of Stockholm, Stockholm, Sweden, has been studying at the University of Montana in Missoula while on sabbatical leave in the U.S.

Since becoming affiliated with the UM Department of Zoology last fall, Ryman, the Swedish counterpart of an associate professor, has been studying techniques of examining genetic variations of protein in wildlife. Ryman, whose speciality is population genetics, has been focusing on the genetics of wildlife populations, especially that of brown trout and moose.

While at UM, Ryman has been applying genetic examination techniques in laboratory study of brown trout and moose samples he brought from Sweden. He also has conducted open seminars and has lectured during his stay here.

Ryman came to UM on a Fulbright-Hays grant in October 1976 and will leave UM soon for continued study in Aikin, S.C., at the Savannah River Ecology Laboratory, a branch of the Institute of Ecology of the University of Georgia, Athens.
